

Vivek Anand

Full Stack Developer | AI / Generative AI

+91 9207314028 | vivekanandthanuja97@gmail.com | Kochi, Kerala, India | [GitHub](#) | [LeetCode](#) | [LinkedIn](#) | [Portfolio](#)

Professional Summary

Full Stack Developer building and deploying production web applications and AI-powered systems with TypeScript, React, Next.js, Node.js, PostgreSQL, and MongoDB. Hands-on experience with REST APIs, authentication, RAG pipelines, hybrid and vector search, LLM integration, and tool calling, from backend and frontend through deployment and client handover.

Skills

Languages: TypeScript, JavaScript, SQL, HTML5, CSS3

Frontend: React.js, Next.js, Redux, Astro, Tailwind CSS, Alpine.js, Responsive UI

Backend: Node.js, Express.js, RESTful APIs, JWT Authentication, RBAC, Drizzle ORM, Zod

Databases: PostgreSQL, pgvector, MongoDB, MySQL, Firebase

AI / GenAI: RAG (Retrieval-Augmented Generation), Hybrid Search, Semantic Search, Vector Search, Embeddings, LLM Integration, Prompt Engineering, AI Agents, Tool Calling, LLM Guardrails

Tools / Cloud: Git, GitHub, Docker, Postman, AWS (EC2), Nginx, Vercel, Netlify, Render, Vercel AI SDK, Anthropic Claude, OpenAI Embeddings, Ollama, Claude Code

Concepts: Data Structures & Algorithms, OOP, SOLID Principles, MVC

Professional Experience

Prime NRI Property Management

Kerala, India

Trainee Software Developer

May 2026 – Sep 2026

- Owned backend architecture across client and admin domains for a production AI platform built by a 3-developer team, using Next.js, TypeScript, and PostgreSQL/pgvector on Neon.
- Architected the RAG retrieval pipeline – hybrid vector/keyword search and embedding-based reranking – backed by a 3-layer LLM guardrail system spanning prompt-injection defense, jailbreak detection, and hallucination checks.
- Built admin control-plane APIs for lead management, knowledge-base curation, and authentication rate-limiting.
- Identified and patched an unauthenticated PII-enumeration vulnerability; hardened rate-limiting and session-token handling against auth-bypass vectors.

Ernest Wells Ltd

United Kingdom (Remote)

Freelance Full Stack Developer (part-time)

Jun 2026

- Independently built and deployed a UK accountancy firm's lead-generation site on Astro 6 (hybrid SSR/static, Vercel), TypeScript, and Tailwind CSS 4, with 20+ reusable components and 9 statically generated service pages from dynamic routes.
- Modeled all content as 18 Zod-validated Astro Content Collections integrated with CloudCannon CMS, letting non-technical staff manage copy, pricing, FAQs, and testimonials independently.
- Built a serverless contact API – honeypot filtering, server-side validation, HTML-escaped output – persisting leads to Google Sheets with Resend notifications, backed by an Alpine.js interactive form.
- Shipped core conversion tools – a 4-step service-recommendation quiz, tax estimator, and pre-filled WhatsApp handoffs – alongside technical SEO via JSON-LD (AccountingService, FAQPage) and Open Graph.
- Managed Vercel deployment, custom domain configuration, launch, and full client handover.

ESAF Small Finance Bank

Kottayam, India

Sales Officer

Jun 2023 – Sep 2023

- Managed customer onboarding, loan processing, and deposit sales, meeting monthly targets.

Darsana Marbles (Family Business)

Kottayam, India

Business Associate

Apr 2019 – 2026 (ongoing, between roles)

- Managed retail operations, inventory, billing, and vendor negotiations; supported the business between technical roles and training.

Selected Projects

LEO – Local-First AI Personal Assistant | Electron, TypeScript, Node.js, Ollama

Jul 2026 – Present

- Directed the AI-assisted build of LEO (via Claude Code) as a personal testbed for evaluating AI models – a modular, hexagonal-style architecture across a 4-package monorepo with a circuit-breaker-protected LLM/voice fallback chain.
- Directed development of a bounded tool-calling agent loop with local markdown RAG and a real-time voice pipeline (Whisper STT, dual TTS, barge-in handling), with MCP integration on the roadmap.

Crownify E-Commerce Platform | React, Node.js, Express, MongoDB, Razorpay | [GitHub](#)

2024

- Migrated a legacy EJS/MVC monolith to a React SPA with SSR on public storefront routes, delivered in phases with zero downtime; re-platformed hosting from AWS EC2/Nginx to Render alongside the rewrite.
- Refactored 1,000+ line controllers into a layered Routes → Controllers → Services → Models architecture across 15+ domain modules, with centralized error handling.
- Implemented Razorpay checkout with server-side signature verification, backed by a transaction-safe wallet ledger and coupon rollback engine.
- Enforced production security controls – double-submit CSRF protection, Helmet headers, rate-limited auth endpoints, and MongoDB-backed session management.
- Established a 3-tier test strategy – Jest integration, Vitest component, and Playwright E2E tests – automated via GitHub Actions CI.

Education & Training

Brototype, Kochi | Full Stack Development Training (MERN)

Jun 2024 – Dec 2025

Girideepam Institute of Advanced Learning | B.Com – Finance & Accounting

Jun 2016 – May 2019

Leora Institution, Kochi | CMA USA – Course Completion

Sep 2019 – May 2020
